

TRIM™ E850

Premium Emulsion

TRIM E850 is a proprietary blend of new vegetable-based technology and premium traditional lubricity additives to yield a very high performance, low management metal removal fluid. This premium emulsion product is robust enough to deliver extended useful life and avoid rancid odours normally associated with traditional emulsions. The optimised lubricity and extreme pressure package delivers exceptional surface finish and tool life on difficult to machine aluminium alloys, inconel, titanium, stainless and high tensile strength steels.

Soluble Oils

Geared up for production:

With superior lubricity and a higher oil content, TRIM emulsions provide a greater boundary layer between the tool and the material, and are ideal for heavy-duty applications such as broaching, reaming, deep hole drilling, drilling, tapping and centerless grinding.

TRIM emulsions work well for machining copper, yellow metals, steel alloys, cast aluminiums, wrought aluminiums and tough-to-machine titanium and nickel-based alloys.

Aerospace Approvals

| Company | Specification |
|---|-----------------------|
| Raytheon Technologies/Collins Aerospace/Pratt & Whitney | PMC 9371 |
| Safran Group | PCS-4001/4002, PR6300 |

Choose E850:

- Delivers exceptional lubricity
- Very long sump life and low carry-off rates result in low operating cost
- Low foam even in soft water areas
- Hard water tolerant
- Non-chlorinated and non-sulphurised extreme pressure (EP) additives control built-up edge (BUE) in tough operations on aerospace materials
- Compatible with all materials excluding magnesium
- Easily recycled or disposed of without special handling or equipment
- Will run effectively for long periods without the need for costly additives

E850 especially for:

Applications — boring, centreless grinding, cutting, deep hole drilling, drilling, grinding, heavy-duty machining center work, high-pressure, high-volume, high-speed milling, high-speed turning, milling, reaming, roll threading, sawing, tapping, thread forming, thread rolling and turning

Metals — aerospace aluminium alloys, brass, bronze, cast aluminium, composites, copper, exotic alloys, heat-treated steel, high tensile-strength steel, high-carbon steel, nickel alloys, nonferrous metals, plastics, stainless steels, steels and titanium

Industries — aerospace, automotive and energy

E850 is free of — boron, chlorine, copper, formaldehyde releasers, halogens, nitrites and phenols

TRIM™ E850

Premium Emulsion

Application Guidelines

- It can run at lower concentrations for higher speed operations (where heat removal is the key issue).
- Higher concentrations are recommended on soft, gummy materials and for lower speed operations where friction reduction and control of built-up edge are critical.
- Concentrations above 7% provide the best sump life.
- For additional product application information, including performance optimisation, please contact your Master Fluid Solutions' Authorised Distributor at <https://www.masterfluids.com/eu/en/distributors/index.php>, your District Sales Manager, or call our Tech Line at +49 211 41 72 8 -900.

Physical Properties Typical Data

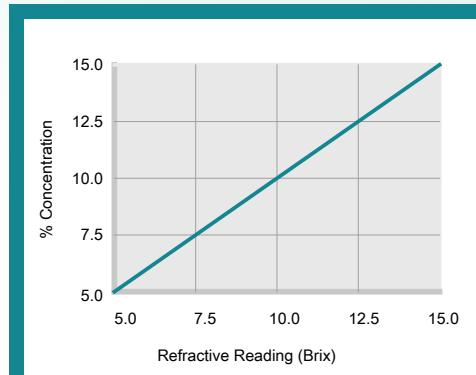

| | |
|---|--------------|
| Colour (Concentrate) | Light brown |
| Colour (Working Solution) | Opaque white |
| Odour (Concentrate) | Mild amine |
| Form (Concentrate) | Liquid |
| Flash Point (Concentrate) (ASTM D93-08) | > 120°C |
| pH (Concentrate as Range) | 9.5 - 10.0 |
| pH (Typical Operating as Range) | 9.0 - 9.5 |
| Coolant Refractometer Factor | 1.0 |

Recommended Metalworking Concentrations

| | |
|----------------------------|---------------|
| Light Duty | 5.0% - 8.0% |
| Moderate Duty | 8.0% - 10.0% |
| Heavy Duty | 10.0% - 15.0% |
| Design Concentration Range | 5.0% - 15.0% |

Concentration by % Brix

% Concentration = Refractive Reading x Refractive Factor
Coolant Refractometer Factor % Brix = 1.0

TRIM™ E850

Premium Emulsion

Mixing Instructions

- Recommended usage concentration in water: 5.0% - 15.0%.
- To help ensure the best possible working solution, add the required amount of concentrate to the required amount of water (never the reverse) and stir until uniformly mixed.
- Use premixed coolant as makeup to improve coolant performance and reduce coolant purchases. The makeup you select should balance the water evaporation rate with the coolant carryout rate. Use our Coolant Makeup Calculator to find the best ratio for your machine: apps.masterfluids.com/makeup/.
- Use mineral-free water to improve sump life and corrosion inhibition while reducing carryoff and concentrate usage.

Additional Information

- Use Master STAGES™ Whamex™ for a quick and thorough precleaning of your machine tool and coolant system.
- Consult Master Fluid Solutions before using on any metals or applications not specifically recommended.
- This product should not be mixed with other metalworking fluids or metalworking fluid additives, except as recommended by Master Fluid Solutions, as this may reduce overall performance, result in adverse health effects, or damage the machine tool and parts. If contamination occurs, please contact Master Fluid Solutions for recommended action.
