

# TRIM<sup>®</sup> SC310HP

## Low-Foam Semisynthetic

TRIM SC310HP is a high-performance semisynthetic cutting fluid concentrate. It has excellent wettability, cooling and anti-corrosion properties and provides better foam control. It also contains chemical surfactants with mechanical lubrication, which can meet the working conditions under normal high-speed cutting and grinding conditions, and its residue is soluble emulsified oil.

### Semisynthetics

#### Cutting edge solutions:

*TRIM<sup>®</sup> semisynthetics offer the cooling and lubricity of a synthetic without the higher oil content of an emulsion. Designed to operate at higher SFPM, semisynthetics perform well on many operations including face milling, cut-off turning, grinding, tapping, and drilling — depending on the specific product.*

*Semisynthetics are compatible with aluminum alloys, alloy steels, tool steels, cast irons, and copper alloys, as well as plastics and composites. With less carryoff, semisynthetics use less material — it all adds up to lower costs.*

#### Choose SC310HP:

- Applicable materials range is quite wide, including cast iron, steel, copper alloy, and many plastics and composite materials, etc.
- Provides superior corrosion inhibition on all ferrous and nonferrous metals and eliminates “hot chip” and clinkering problems often seen when machining cast iron
- Provides better foam control
- Keeps machines very clean while leaving a soft fluid film for ease of cleaning and reduced maintenance
- Has exceptional sump life and very low makeup for extremely low total operating cost
- Low odor and mist makes for an operator-friendly product
- Easy recycling or disposal with conventional techniques and equipment

#### SC310HP especially for:

**Applications** — band sawing, centerless grinding, cylindrical grinding, drilling, form cylindrical grinding, internal grinding, milling, plain grinding, reaming, tapping, and turning

**Metals** — cast iron, ferrous metals, nonferrous metals, stainless steels, and steels

**Industries** — automotive, general fabrication, and job shop

**SC310HP is free of** — NPEs and sulfur

## Low-Foam Semisynthetic

### Application Guidelines

- Works well in the general machine shops where soluble oil may smoke or not cool sufficiently under heavy cutting loads
- In mixed metal situations, concentration control is critical to fight the effects of galvanic corrosion (7.5% plus)
- Not recommended for use on very reactive metals like aluminum alloys, magnesium, and zirconium
- Check for and correct mechanical causes of foam before adding antifoams
- Concentrations of 7.0% or more offers both the best sump life and corrosion inhibition
- For additional product application information, including performance optimization, please contact your Master Fluid Solutions' Authorized Distributor at <https://www.masterfluids.com/in/en-in/distributors/index.php>, your District Sales Manager, or email us at [india-info@masterfluids.com](mailto:india-info@masterfluids.com).

### Physical Properties Typical Data

Color (Concentrate)	Blue
Color (Working Solution)	Blue
Odor (Concentrate)	Mild
Form (Concentrate)	Liquid
Flash Point (Concentrate) (ASTM D92-90)	> 100°C
pH (Concentrate as Range)	9.6 - 10.6
pH (Typical Operating as Range)	9.1 - 10.1
Coolant Refractometer Factor	1.3

### Recommended Metalworking Concentrations

Light Duty	3.0% - 6.0%
Moderate Duty	6.0% - 8.0%
Heavy Duty	8.0% - 10.0%
Design Concentration Range	3.0% - 10.0%

### Concentration by % Brix

$\% \text{ Concentration} = \text{Refractive Reading} \times \text{Refractive Factor}$   
Coolant Refractometer Factor % Brix = 1.3

## Low-Foam Semisynthetic

### Mixing Instructions

- Recommended usage concentration in water: 3.0% - 10.0%.
- To help ensure the best possible working solution, add the required amount of concentrate to the required amount of water (never the reverse) and stir until uniformly mixed.
- Use premixed coolant as makeup to improve coolant performance and reduce coolant purchases. The makeup you select should balance the water evaporation rate with the coolant carryout rate. Use our Coolant Makeup Calculator to find the best ratio for your machine: [apps.masterfluids.com/makeup/](https://apps.masterfluids.com/makeup/).
- Use mineral-free water to improve sump life and corrosion inhibition while reducing carryoff and concentrate usage.

### Additional Information

- Use Master STAGES<sup>™</sup> Whamex XT<sup>™</sup> for a quick and thorough precleaning of your machine tool and coolant system.
- Consult Master Fluid Solutions before using on any metals or applications not specifically recommended.
- This product should not be mixed with other metalworking fluids or metalworking fluid additives, except as recommended by Master Fluid Solutions, as this may reduce overall performance, result in adverse health effects, or damage the machine tool and parts. If contamination occurs, please contact Master Fluid Solutions for recommended action.
